semesterplanner-lua — Semesterplanner package in lua with tikz only*

Lukas Heindl
: https://gitlab.com/AtticusSullivan/semesterplanner-lua

Released ?

TODO documentation

Abstract

This package provides a mean to easily print a timetable e.g. for a semesterplan. The reason for this package to exist is that I wanted to reimplement https://github.com/nlschn/semesterplanner/ with printing the timetable with `tikz` only (which is more easily to be modified) and with the ability to make entries spanning only a fraction of the column (for showing simultanious events).

Documents using this package need to be compiled with LuaLaTeX. The package requires `xcolor`, `fontawesome`, `tikz` (and `pgfkeys`).

Contents

1 Usage

1.1 timetable

`timetable` `\begin{timetable}[opts]\ldots\end{timetable}`
`opts` are of course optional arguments:

`days` List of the names of the days that should be set as column names. Note that if you specify only 4 names only these 4 columns will be printed (with the first day being identified as Monday) *Default:* `Mon,Thue,Wend,Thur,Fri`

*This file describes version ?, last revised ?.

start time Explicit start-time of the timetable given in minutes (`HH*60 + MM`). Can be set as `start time/.evaluated={HH*60 + MM}`. If this is empty, the start time is derived from the given events. *Default: ""*

end time Equivalent to `start-time` *Default: ""*

width Give the width of the timetable. (can be given e.g. as `\textwidth` as this is directly given to tikz). *Default:* `\textwidth`

length Give the length of the timetable (measured in `cm`) (has to be a straight number since this is needed in calculation) *Default: 10*

This is the core environment of this package. Within it you can use `\lecture`, `\seminar`, `\tutorial`, `\officehour` and `\meeting`. All these commands are only defined inside the `timetable` environment, and have the same structure.

```
\lecture     \lecture    {Name}{Lecturer}{Place}{Day}{Time}{Priority}{Event-code}
\tutorial    \tutorial   {Name}{Lecturer}{Place}{Day}{Time}{Priority}{Event-code}
\seminar     \seminar    {Name}{Lecturer}{Place}{Day}{Time}{Priority}{Event-code}
\officehour  \officehour{Name}{Lecturer}{Place}{Day}{Time}{Priority}{Event-code}
\meeting     \meeting    {Name}{Lecturer}{Place}{Day}{Time}{Priority}{Event-code}
```

Name Give the name of the lecture

Lecturer Give the name of the lecturer

Place Give the place of the event (most probably the room or an online plattform, see 1.2)

Day The weekday on which the event takes place. Has to be one of `M`, `T`, `W`, `Th`, `F` for **M**onday, **T**huesday, **W**ednesday, **Th**ursday, **F**riday. Might become customizable in a future version.

Time The timespan of the event formatted as `HH:MM-HH:MM` (24H clock)

Priority The priority of the event (see 1.2)

Event-code Free customizable event code. See the documentation at the end for keys that can be used here (all keys in `/event`). To simply pass arguments to the tikz-node that is being created for the event use `tikz/.append={your arguments}` (be careful with `text width`, `text height`, `text depth` as these keys are being used for the dimensions of the node as well as with `anchor`)

The entries `Day` and `Time` are mandatory since they are needed for the positioning of the node. All others are merely necessary for the content of the node and are therefore nor mandatory.

1.1.1 Special Notes

Note that the `length` argument does specify the length of the timetable without taking account of the column headers.

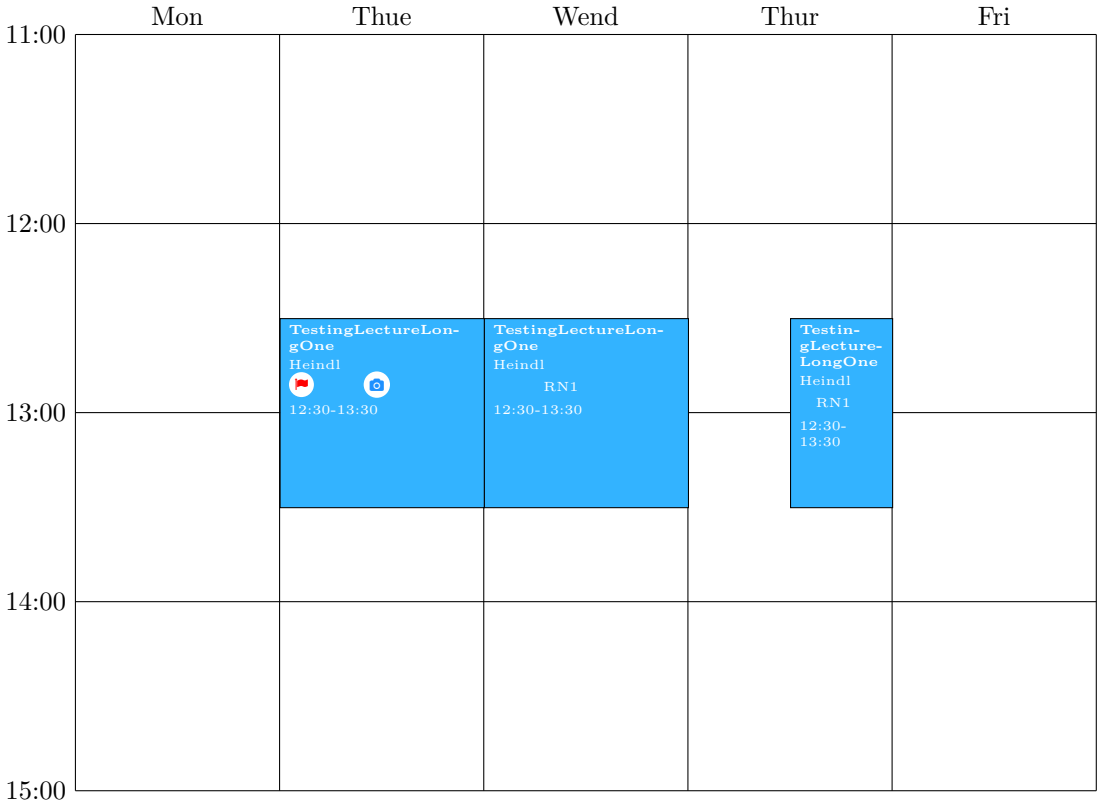
Same goes for the `width` parameter regarding the labels containing the time on the right. Since in this case any tex-lenght is allowed, you can simply try to subtract the length of the clock label using something like `\settowidth{\length}{12:30}` to set a length to the length of a clock label and then subtract this from the length you want to specify.

Hint: The content of the environment isn't processed by this package. Only the event commands (so to speak `\lecture`,`\tutorial`,`\seminar`,`\officehour`,`\meeting` are relevant. All other contents are set immediately before the timetable. Therefore, if you wan to add e.g. a `\hspace*{10cm}` to shift the timetable to the left, the last line of the env would be the place to do so (there musn't be an empty line below since otherwise a new paragraph is started).

1.1.2 Example

```
\begin{timetable}[
        days={Mon,Thue,Wend,Thur,Fri}, start
        time/.evaluated={11*60}, end time/.evaluated={15*60}
    ]
    \lecture[title={TestingLectureLongOne},speaker={Heindl},location={RN1},day={W},time
13:30}]
    \lecture[title={TestingLectureLongOne},speaker={Heindl},location={RN1},day={Th},tim
13:30},offset=0.5,scale width=0.5]
    \lecture[title={TestingLectureLongOne},speaker={Heindl},location={\zoom},day={T},ti
13:30},prio={\phigh}]
\end{timetable}
```

Timetable



1.2 Icons

This package defines some modified fontawesome icons (they are being encircled with a white circle for better readability).

\zoom		\teams	
\BBB		\youtube	
\pmandatory		\phigh	
\pmid		\plow	
\pnone			
\tbd		\tba	

2 Implementation

This package uses `semesterplanner-lua` as prefix/directory where possible. Since this is not possible for latex macro names, in this occasions `semesterplannerLua@` is used as prefix.

2.1 semesterplanner-lua.sty

2.1.1 Global Stuff

```
1 ⟨*package⟩
```

Define some colors for the course types (can be globally overwritten)

```
2 \definecolor{seminar}{rgb}{1.0, 0.8, 0.0}
3 \definecolor{lecture}{rgb}{0.2, 0.7, 1.0}
4 \definecolor{tutorial}{rgb}{0.0, 0.8, 0.0}
5 \definecolor{meeting}{rgb}{0.8, 0.0, 0.0}
6 \definecolor{officehour}{rgb}{0.0, 0.4, 0.6}
7 \definecolor{DodgerBlue}{HTML}{1E90FF}
```

`\semesterplannerLua@encircle` This macro puts a circle arround its argument for better readability. In this package this is used for the fontawesome symbols.

```
8     \newcommand*{\semesterplannerLua@encircle}[1]{
9         \begin{minipage}[b][1em][c]{1.5em}
10            \begin{tikzpicture}
11                \node[fill,circle,inner sep=1pt, color = white] {#1};
12            \end{tikzpicture}
13        \end{minipage}
14    }
```

Commands for exams

`\oral`

```
15 \protected\def\oral{\faComment}
```

`\written`

```
16 \protected\def\written{\faPencil}
```

Commands for symbols of priority

`\pmandatory`

```
17     \protected\def\pmandatory{\semesterplannerLua@encircle{\textcolor{red}{\faWarning}}}
```

`\phigh`

```
18     \protected\def\phigh{\semesterplannerLua@encircle{\textcolor{red}{\faFlag}}}
```

`\pmid`

```
19     \protected\def\pmid{\semesterplannerLua@encircle{\textcolor{yellow}{\faFlag}}}
```

`\plow`

```
20     \protected\def\plow{\semesterplannerLua@encircle{\textcolor{green}{\faFlag}}}
```

`\pnone`

```
21     \protected\def\pnone{\semesterplannerLua@encircle{\textcolor{gray}{\faTimesCircle}}}
```

Commands for online platforms.

`\teams`

```
22     \protected\def\teams{\semesterplannerLua@encircle{\textcolor{DodgerBlue}{\faWindows}}}
```

`\zoom`

```
23     \protected\def\zoom{\semesterplannerLua@encircle{\textcolor{DodgerBlue}{\faCamera}}}
```

\youtube

```
24    \protected\def\youtube{\semesterplannerLua@encircle{\textcolor{red}{\faYoutubePlay}}}
```

\BBB

```
25    \protected\def\BBB{\semesterplannerLua@encircle{\textcolor{DodgerBlue}{\faBold}}}
```

Command for "To be determined" and "To be Announced"

\tbd

```
26    \protected\def\tbd{\faQuestion}
```

\tba

```
27    \protected\def\tba{\faBullhorn}
```

Load the lua modules

```
28 \directlua{sp = require("semesterplanner-lua-timetable.lua")}
29 \directlua{cal = require("semesterplanner-lua-calendar.lua")}
```

Set all the pgfkeys required for the arguments. To achieve that the defaults are restored every time the environment is used, this is inside the environment definition. This of course disables all possibilities of setting a global default but enables setting local defaults for the events

```
30    \pgfkeys{
```

`/semesterplanner-lua` will be the pgf-path used for this package. Here all used keys are set (and initialized with defaults. `timetable/env/`:

days is a list of strings representing the header names for the day columns in the timetable (adding Sat and Sun (additional entries) will result in two more columns.

start time can be used to set a fixed time where the timetable starts (otherwise this is calculated from the entries) to enable this behaviour this key has to be set to `HH*60 + MM` (easy way is by using `start time/.evaluated={HH*60+MM}`)

end time equivalent to **start time**

width is the horizontal width of the timetable (not including the column headers on the top) this can be a latex length string or **\textwidth** as well.

length is the vertical length of the timetable (not including the clock labels on the side) measured in cm (in future versions this may become measured in pts for better interaction with the LaTeX lengths.

```
31        /semesterplanner-lua/timetable/env/.cd,
32        days/.initial={Mon,Thue,Wend,Thur,Fri}, days/.default={Mon,Thue,Wend,Thur,Fri},
33        dayse/.initial={M,T,W,Th,F}, dayse/.default={M,T,W,Th,F},
34        %
35        start time/.initial=, start time/.default=,
36        end time/.initial=, end time/.default=,
37        %
38        width/.initial=\textwidth, width/.default=\textwidth,
39        length/.initial=10, length/.default=10,
40        %
```

`timetable/event/`:

content is the content of the event (is passed on without any formatting). Since this is passed to lua without modification its value must be an unexpanded string (lua will simply print it so the eventually the string will be evaluated)

time is a `HH:MM-HH:MM` string representing start- and end-time of the event. Used in constructing the content as well

day is either `M`,`T`,`W`,`Th` or `F` specifying the day on which the event takes place

tikz this key allows the user to manually pass options to the node created for this event

scale width allows to scale the width of the event to be able to draw overlapping events besides each other. Will usually be a value between `0` and `1`.

offset same goal like **scale width** but shifts the event node by the given value to the right. (Given as value between `0` and `1` indicating how many columns the event should be shifted)

textcolor foreground color of the content text

title title (set in bold by default)

speaker

location

prio

formatter this is special

```
41        /semesterplanner-lua/timetable/event/.cd,
42        % event arguments
43        content/.initial=, content/.default=,
44        %
45        time/.initial=, time/.default=,
46        day/.initial=, day/.default=,
47        %
48        tikz/.initial=, tikz/.default=,
49        scale width/.initial=1, scale width/.default=1,
50        offset/.initial=0, offset/.default=0,
51        %
52        textcolor/.initial=, textcolor/.default=,
53        title/.initial=, title/.default=,
54        speaker/.initial=, speaker/.default=,
55        location/.initial=, location/.default=,
56        password/.initial=, password/.default=,
57        prio/.initial=, prio/.default=,
58        type/.initial=, type/.default=,
59        formatter/.initial=timetableformatter, formatter/.default=timetableformatter,
60        %
```

calendar/:

draw

room

prio

course

desc

start

end

tikz

period

shift

print Only makes sence if the command is suffixed by a `%` otherwise somehow a space gets inserted (eventhough the `%` is inserted from lua as well

```
        /semesterplanner-lua/calendar/.cd,
        draw/.initial={true}, draw/.default={true},
        room/.initial={}, room/.default={},
        time/.initial={}, time/.default={},
        prio/.initial={}, prio/.default={},
        course/.initial={}, course/.default={},
        desc/.initial={}, desc/.default={},
        type/.initial={}, type/.default={},
        date/.initial={}, date/.default={},
        end/.initial={}, end/.default={},
        tikz/.initial={}, tikz/.default={},
        period/.initial={nil}, period/.default={nil},
        shift/.initial={true}, shift/.default={true},
        print/.initial={true}, print/.default={true},
    }
```

2.2 Tikz Calendar add weekday labels

```
\tikzoption{day headings}{\tikzstyle{day heading}=[#1]}
\tikzstyle{day heading}=[]
\tikzstyle{day letter headings}=[
    execute before day scope={ \ifdate{day of month=1}{%
      \pgfmathsetlength{\pgf@ya}{\tikz@lib@cal@yshift}%
      \pgfmathsetlength\pgf@xa{\tikz@lib@cal@xshift}%
      \pgftransformyshift{-\pgf@ya}
      \foreach \d/\l in {0/M,1/T,2/W,3/T,4/F,5/S,6/S} {
        \pgf@xa=\d\pgf@xa%
        \pgftransformxshift{\pgf@xa}%
        \pgftransformyshift{\pgf@ya}%
        \node[every day,day heading]{\l};%
      }
    }{}%
  }%
]
```

2.2.1 Local Stuff (timetable-env local)

`timetable` This is the environment doing all the stuff. To gate the positions where the corresponding macros can be used (and in terms of pgfkeys for reasons of default values) all the macros used are put into the environment.

```
\newenvironment{timetable}[1][]{
    \section*{\faClockO~Timetable}
```

Read the argumens given by the user after restoring the defaults (Restoring currently makes no sense, since they are created a few lines above anyways, but creation might be moved outside the environment some day.
Afterwards the lua module is beeing initialized (erase data from possible previous runs.

```
    \pgfkeys{/semesterplanner-lua/timetable/env/.cd, days,dayse, start time,end time, width,l
    \directlua{sp.init{
        days=[[\pgfkeysvalueof{/semesterplanner-lua/timetable/env/days}]],
        min=[[\pgfkeysvalueof{/semesterplanner-lua/timetable/env/start time}]],
        max=[[\pgfkeysvalueof{/semesterplanner-lua/timetable/env/end time}]],
        dayse=[[\pgfkeysvalueof{/semesterplanner-lua/timetable/env/dayse}]]}}
```

`\semesterplanner@event` Is used to pass the event to the lua engine which in turn will collect the event to draw it in the end. For that the arguments given are parsed after restoring the pgf keys to their default values. The optional argument herby is a sequence of pgf keys, the second argument is a string representing the content (this MUST be unexpanded since this is passed to lua which in turn will pass it unmodified back)

```
    \newcommand{\semesterplannerLua@event}[1][]{
        \pgfkeys{/semesterplanner-lua/timetable/event/.cd,content,time,day,tikz,scale
        width,offset,textcolor,title,speaker,type,location,password,prio,formatter, ##1}
        \directlua{
            sp.addEvent{
```

```
                time="\pgfkeysvalueof{/semesterplanner-lua/timetable/event/time}",
                day="\pgfkeysvalueof{/semesterplanner-lua/timetable/event/day}",
                tikz=[[\pgfkeysvalueof{/semesterplanner-lua/timetable/event/tikz}]],
                offset=\pgfkeysvalueof{/semesterplanner-lua/timetable/event/offset},
                scale_width=\pgfkeysvalueof{/semesterplanner-lua/timetable/event/scale width},
                formatter=\pgfkeysvalueof{/semesterplanner-lua/timetable/event/formatter},
                textcolor=[[\pgfkeysvalueof{/semesterplanner-lua/timetable/event/textcolor}]],
                title=[[\pgfkeysvalueof{/semesterplanner-lua/timetable/event/title}]],
                speaker=[[\pgfkeysvalueof{/semesterplanner-lua/timetable/event/speaker}]],
                location=[[\pgfkeysvalueof{/semesterplanner-lua/timetable/event/location}]],
                password=[[\pgfkeysvalueof{/semesterplanner-lua/timetable/event/password}]],
                prio=[[\pgfkeysvalueof{/semesterplanner-lua/timetable/event/prio}]],
                type=[[\pgfkeysvalueof{/semesterplanner-lua/timetable/event/type}]],
            }
        }
    }
```

Short-hand macros for different events using the corresponding background color

`\lecture`

```
    \newcommand{\lecture}[1][]{
        \semesterplannerLua@event[tikz={fill=lecture,}, textcolor=white, type=lect, ##1]
        \ignorespaces
    }
```

`\seminar`

```
    \newcommand{\seminar}[1][]{
        \semesterplannerLua@event[tikz={fill=seminar,}, textcolor=white, type=sem, ##1]
        \ignorespaces
    }
```

`\tutorial`

```
    \newcommand{\tutorial}[1][]{
        \semesterplannerLua@event[tikz={fill=tutorial,}, textcolor=white, type=tut, ##1]
        \ignorespaces
    }
```

`\meeting`

```
    \newcommand{\meeting}[1][]{
        \semesterplannerLua@event[tikz={fill=meeting,}, textcolor=white, type=meet, ##1]
        \ignorespaces
    }
```

`\officehour`

```
    \newcommand{\officehour}[1][]{
        \semesterplannerLua@event[tikz={fill=officehour,}, textcolor=white, type=office, ##1]
        \ignorespaces
    }

}{
```

At the end of the environment after all events have been collected, generate and output the tikz code needed to draw the timetable.

```
    \directlua{sp.draw(
        [[\pgfkeysvalueof{/semesterplanner-lua/timetable/env/length}]],
        [[\pgfkeysvalueof{/semesterplanner-lua/timetable/env/width}]])}
}
```

`printSpCalendar` Print a calendar from startDate to endDate (encoded as YYYY-MM-DD) as one calendar per month in a matrix with the given amount of columns

```
\newcommand{\printSpCalendar}[3][3]{\directlua{cal.drawCalendar("#2", "#3", #1)}}
```

```
148
149 \newenvironment{appointments}[2][Room]{

⟨/package⟩

2.3 semesterplanner-lua-timetable.lua

⟨∗luaTimetable⟩

`init` Initialize global variables to remove previous values (e.g. events from the previous timetable)

`days` A string with the names of the weekdays for the header

`min` Time where the timetable should start. If empty this is calculated from the events.

`max` Time where the timetable should end. If empty this is calculated from the events.

```
function init(opts)
    tex.print([[\newwrite\timetableATdataOutput \immediate\openout\timetableATdataOutput=\jobn
data.dat]])
    if(not checkKeys(opts, {"days", "min", "max", "dayse"})) then
        error("missing argument")
    end
    -- clean up first
    -- global variables
    EVENTS={}

                minuteToFrac(e.from,min,max)*-length, -- ycoord
                e.content -- content
                )
            )
        end
    end
    tex.print([[\end{tikzpicture}]])
end
```

`searchArray` Searches an array for a given value and returns the index if found. On error `nil` is returned

```
379 function search_array(t, s)
380     for k,v in ipairs(t) do
381         if(v == s) then return k end
382     end
383     return nil
384 end
385
```

`minuteToFrac` Calculates at which fraction of the total duration of `max-min` the time `minute` is located

```
386 function minuteToFrac(minute, min, max)
387     return (minute-min)/(max-min)
388 end
```

`prepareMinMax` Calculates the next hour of `MIN` (next before) and `MAX` (next after) and returns it (the hour) and the corresponding `min`/`max` (same in minutes)

```
389 function prepareMinMax(min, max)
390     local minH = math.floor(min/60)
391     local maxH = math.ceil(max/60)
392     local min = minH*60
393     local max = maxH*60
394     return min, minH, max, maxH
395 end
```

`checkKeys` Checks if all `k`s are present in table `t`

```
396 function checkKeys(t, k)
397     for _,x in ipairs(k) do
398         if(t[x] == nil) then
399             return false
400         end
401     end
402     return true
403 end
```

`dur2Int` Takes a clock duration formatted as `HH:MM-HH:MM`, splits it, checks for validity and returns begin/end time in minutes

```
404 function dur2Int(clk)
405     local f1,f2, t1,t2 = clk:match("^(%d%d?):(%d%d)-(%d%d?):(%d%d)$")
406     if(f1 ~= nil and f2 ~= nil and t1 ~= nil and t2 ~= nil) then
407         f1 = tonumber(f1) f2 = tonumber(f2)
408         t1 = tonumber(t1) t2 = tonumber(t2)
409         assert(f1 >= 0 and f1 < 24, "Hours have to be >= 0 && < 24")
410         assert(f2 >= 0 and f2 < 60, "Mins have to be >= 0 && < 60")
411         assert(t1 >= 0 and t1 < 24, "Hours have to be >= 0 && < 24")
412         assert(t2 >= 0 and t2 < 60, "Mins have to be >= 0 && < 60")
413         return f1*60 + f2, t1*60 + t2
414     else
415         error("clk string \"" .. clk .. "\" was no valid clock string")
416     end
417 end
```

`prepareDays` Splits the comma-sep string `days` into an array

```
418 function prepareDays(days)
419     local ret = {}
420     for m in days:gmatch("[^,]+") do
421         table.insert(ret, m)
422     end
423     return ret
424 end
```

`day2Int` converts the day-string to an integer (Monday is 0)

```
function day2Int(day)
    return search_array(DAYSE, day) - 1
end
% \end{macro}
% \begin{macro}{copyArray}
% Returns a copy of the table |obj|
%    \begin{macrocode}

function copy_array(obj)
    if type(obj) ~= 'table' then return obj end
    local res = {}
