

# semesterplanner-lua — Semesterplanner package in lua with tikz only\*

Lukas Heindl

🔗: <https://gitlab.com/AtticusSullivan/semesterplanner-lua>

Released ?

TODO documentation

## Abstract

This package provides a mean to easily print a timetable e.g. for a semesterplan. The reason for this package to exist is that I wanted to reimplement <https://github.com/nlschn/semesterplanner/> with printing the timetable with `tikz` only (which is more easily to be modified) and with the ability to make entries spanning only a fraction of the column (for showing simultaneous events).

Documents using this package need to be compiled with LuaLaTeX. The package requires `xcolor`, `fontawesome`, `tikz` (and `pgfkeys`).

## Contents

<b>1</b>	<b>Usage</b>	<b>1</b>
1.1	timetable	1
1.1.1	Special Notes	2
1.1.2	Example	3

2.2.1	Local Stuff (timetable-env local)	7
2.3	semesterplanner-lua-timetable.lua	10
2.4	semesterplanner-lua-calendar.lua	14
<b>3</b>	<b>Change History</b>	<b>16</b>
<b>4</b>	<b>Index</b>	<b>16</b>

## 1 Usage

### 1.1 timetable

`timetable` `\begin{timetable}[opts]\ldots\end{timetable}`  
opts are of course optional arguments:

**days** List of the names of the days that should be set as column names. Note that if you specify only 4 names only these 4 columns will be printed (with the first day being identified as Monday) *Default: Mon, Thue, Wend, Thur, Fri*

---

\*This file describes version ?, last revised ?.

**start time** Explicit start-time of the timetable given in minutes (HH\*60 + MM). Can be set as **start time/.evaluated={HH\*60 + MM}**. If this is empty, the start time is derived from the given events. *Default: ""*

**end time** Equivalent to **start-time** *Default: ""*

**width** Give the width of the timetable. (can be given e.g. as `\textwidth` as this is directly given to tikz). *Default: \textwidth*

**length** Give the length of the timetable (measured in cm) (has to be a straight number since this is needed in calculation) *Default: 10*

This is the core environment of this package. Within it you can use `\lecture`, `\seminar`, `\tutorial`, `\officehour` and `\meeting`. All these commands are only defined inside the `timetable` environment, and have the same structure.

<code>\lecture</code>	<code>\lecture</code>	<code>{Name}{Lecturer}{Place}{Day}{Time}{Priority}{Event-code}</code>
<code>\tutorial</code>	<code>\tutorial</code>	<code>{Name}{Lecturer}{Place}{Day}{Time}{Priority}{Event-code}</code>
<code>\seminar</code>	<code>\seminar</code>	<code>{Name}{Lecturer}{Place}{Day}{Time}{Priority}{Event-code}</code>
<code>\officehour</code>	<code>\officehour</code>	<code>{Name}{Lecturer}{Place}{Day}{Time}{Priority}{Event-code}</code>
<code>\meeting</code>	<code>\meeting</code>	<code>{Name}{Lecturer}{Place}{Day}{Time}{Priority}{Event-code}</code>

**Name** Give the name of the lecture

**Lecturer** Give the name of the lecturer

**Place** Give the place of the event (most probably the room or an online platform, see 1.2)

**Day** The weekday on which the event takes place. Has to be one of M, T, W, Th, F for Monday, Tuesday, Wednesday, Thursday, Friday. Might become customizable in a future version.

**Time** The timespan of the event formatted as HH:MM-HH:MM (24H clock)

**Priority** The priority of the event (see 1.2)

**Event-code** Free customizable event code. See the documentation at the end for keys that can be used here (all keys in `/event`). To simply pass arguments to the tikz-node that is being created for the event use `tikz/.append={your arguments}` (be careful with `text width`, `text height`, `text depth` as these keys are being used for the dimensions of the node as well as with `anchor`)

The entries **Day** and **Time** are mandatory since they are needed for the positioning of the node. All others are merely necessary for the content of the node and are therefore not mandatory.

### 1.1.1 Special Notes

Note that the **length** argument does specify the length of the timetable without taking account of the column headers.

Same goes for the **width** parameter regarding the labels containing the time on the right. Since in this case any tex-length is allowed, you can simply try to subtract the length of the clock label using something like `\settowidth{\length}{12:30}` to set a length to the length of a clock label and then subtract this from the length you want to specify.

**Hint:** The content of the environment isn't processed by this package. Only the event commands (so to speak `\lecture`, `\tutorial`, `\seminar`, `\officehour`, `\meeting` are relevant. All other contents are set immediately before the timetable. Therefore, if you want to add e.g. a `\hspace*{10cm}` to shift the timetable to the left, the last line of the env would be the place to do so (there mustn't be an empty line below since otherwise a new paragraph is started).

### 1.1.2 Example

```
\begin{timetable}[
    days={Mon,Thue,Wend,Thur,Fri}, start
    time/.evaluated={11*60}, end time/.evaluated={15*60}
]
    \lecture[title={TestingLectureLongOne},speaker={Heindl},location={RN1},day={W},time
13:30}]
    \lecture[title={TestingLectureLongOne},speaker={Heindl},location={RN1},day={Th},time
13:30},offset=0.5,scale width=0.5]
    \lecture[title={TestingLectureLongOne},speaker={Heindl},location={\zoom},day={T},time
13:30},prio={\phigh}]
\end{timetable}
```

## ⌚ Timetable

	Mon	Thue	Wend	Thur	Fri
11:00					
12:00					
13:00		<div>TestingLectureLongOne</div> <div>Heindl</div> <div>   </div> <div>12:30-13:30</div>	<div>TestingLectureLongOne</div> <div>Heindl</div> <div>RN1</div> <div>12:30-13:30</div>	<div>TestingLectureLongOne</div> <div>Heindl</div> <div>RN1</div> <div>12:30-13:30</div>	
14:00					
15:00					

## 1.2 Icons

This package defines some modified fontawesome icons (they are being encircled with a white circle for better readability).

<code>\zoom</code>		<code>\teams</code>	
<code>\BBB</code>		<code>\youtube</code>	
<code>\pmandatory</code>		<code>\phigh</code>	
<code>\pmid</code>		<code>\plow</code>	
<code>\pnone</code>			
<code>\tbd</code>		<code>\tba</code>	

## 2 Implementation

This package uses `semesterplanner-lua` as prefix/directory where possible. Since this is not possible for latex macro names, in this occasions `semesterplannerLua@` is used as prefix.

### 2.1 semesterplanner-lua.sty

#### 2.1.1 Global Stuff

```
1 \package
```

Define some colors for the course types (can be globally overwritten)

```
2 \definecolor{seminar}{rgb}{1.0, 0.8, 0.0}
3 \definecolor{lecture}{rgb}{0.2, 0.7, 1.0}
4 \definecolor{tutorial}{rgb}{0.0, 0.8, 0.0}
5 \definecolor{meeting}{rgb}{0.8, 0.0, 0.0}
6 \definecolor{officehour}{rgb}{0.0, 0.4, 0.6}
7 \definecolor{DodgerBlue}{HTML}{1E90FF}
```

`\semesterplannerLua@encircle` This macro puts a circle around its argument for better readability. In this package this is used for the fontawesome symbols.

```
8 \newcommand*{\semesterplannerLua@encircle}[1]{
9     \begin{minipage}[b][1em][c]{1.5em}
10         \begin{tikzpicture}
11             \node[fill,circle,inner sep=1pt, color = white] {#1};
12         \end{tikzpicture}
13     \end{minipage}
14 }
```

Commands for exams

`\oral`

```
15 \protected\def\oral{\faComment}
```

`\written`

```
16 \protected\def\written{\faPencil}
```

Commands for symbols of priority

`\pmandatory`

```
17 \protected\def\pmandatory{\semesterplannerLua@encircle{\textcolor{red}{\faWarning}}}
```

`\phigh`

```
18 \protected\def\phigh{\semesterplannerLua@encircle{\textcolor{red}{\faFlag}}}
```

`\pmid`

```
19 \protected\def\pmid{\semesterplannerLua@encircle{\textcolor{yellow}{\faFlag}}}
```

`\plow`

```
20 \protected\def\plow{\semesterplannerLua@encircle{\textcolor{green}{\faFlag}}}
```

`\pnone`

```
21 \protected\def\pnone{\semesterplannerLua@encircle{\textcolor{gray}{\faTimesCircle}}}
```

Commands for online platforms.

`\teams`

```
22 \protected\def\teams{\semesterplannerLua@encircle{\textcolor{DodgerBlue}{\faWindows}}}
```

`\zoom`

```
23 \protected\def\zoom{\semesterplannerLua@encircle{\textcolor{DodgerBlue}{\faCamera}}}
```

```

\youtube
24 \protected\def\youtube{\semesterplannerLua@encircle{\textcolor{red}{\faYoutubePlay}}}

\BBB
25 \protected\def\BBB{\semesterplannerLua@encircle{\textcolor{DodgerBlue}{\faBold}}}

Command for "To be determined" and "To be Announced"

\tbd
26 \protected\def\tbd{\faQuestion}

\tba
27 \protected\def\tba{\faBullhorn}

Load the lua modules
28 \directlua{sp = require("semesterplanner-lua-timetable.lua")}
29 \directlua{cal = require("semesterplanner-lua-calendar.lua")}

Set all the pgfkeys required for the arguments. To achieve that the defaults are restored
every time the environment is used, this is inside the environment definition. This of
course disables all possibilities of setting a global default but enables setting local defaults
for the events
30 \pgfkeys{
/semesterplanner-lua will be the pgf-path used for this package. Here all used keys
are set (and initialized with defaults. timetable/env/:

days is a list of strings representing the header names for the day columns in the
timetable (adding Sat and Sun (additional entries) will result in two more columns.

start time can be used to set a fixed time where the timetable starts (otherwise this
is calculated from the entries) to enable this behaviour this key has to be set to
HH*60 + MM (easy way is by using start time/.evaluated={HH*60+MM})

end time equivalent to start time

width is the horizontal width of the timetable (not including the column headers on the
top) this can be a latex length string or \textwidth as well.

length is the vertical length of the timetable (not including the clock labels on the side)
measured in cm (in future versions this may become measured in pts for better
interaction with the LaTeX lengths.

31 /semesterplanner-lua/timetable/env/.cd,
32 days/.initial={Mon,Thue,Wend,Thur,Fri}, days/.default={Mon,Thue,Wend,Thur,Fri},
33 dayse/.initial={M,T,W,Th,F}, days/.default={M,T,W,Th,F},
34 %
35 start time/.initial=, start time/.default=,
36 end time/.initial=, end time/.default=,
37 %
38 width/.initial=\textwidth, width/.default=\textwidth,
39 length/.initial=10, length/.default=10,
40 %

timetable/event/:

content is the content of the event (is passed on without any formatting). Since this
is passed to lua without modification its value must be an unexpanded string (lua
will simply print it so the eventually the string will be evaluated)

time is a HH:MM-HH:MM string representing start- and end-time of the event. Used in
constructing the content as well

day is either M,T,W,Th or F specifying the day on which the event takes place

tikz this key allows the user to manually pass options to the node created for this event

```

**scale width** allows to scale the width of the event to be able to draw overlapping events besides each other. Will usually be a value between 0 and 1.

**offset** same goal like **scale width** but shifts the event node by the given value to the right. (Given as value between 0 and 1 indicating how many columns the event should be shifted)

**textcolor** foreground color of the content text

**title** title (set in bold by default)

**speaker**

**location**

**prio**

**formatter** this is special

```
41      /semesterplanner-lua/timetable/event/.cd,  
42      % event arguments  
43      content/.initial=, content/.default=,  
44      %  
45      time/.initial=, time/.default=,  
46      day/.initial=, day/.default=,  
47      %  
48      tikz/.initial=, tikz/.default=,  
49      scale width/.initial=1, scale width/.default=1,  
50      offset/.initial=0, offset/.default=0,  
51      %  
52      textcolor/.initial=, textcolor/.default=,  
53      title/.initial=, title/.default=,  
54      speaker/.initial=, speaker/.default=,  
55      location/.initial=, location/.default=,  
56      prio/.initial=, prio/.default=,  
57      formatter/.initial=timetableformatter, formatter/.default=timetableformatter,  
58      %
```

calendar/:

**draw**

**room**

**prio**

**course**

**desc**

**start**

**end**

**tikz**

**period**

**shift**

**print** Only makes sense if the command is suffixed by a % otherwise somehow a space gets inserted (eventhough the % is inserted from lua as well)

```
59      /semesterplanner-lua/calendar/.cd,  
60      draw/.initial={true}, draw/.default={true},  
61      room/.initial={}, room/.default={},  
62      time/.initial={}, time/.default={},  
63      prio/.initial={}, prio/.default={},
```

```

64     course/.initial={}, course/.default={},
65     desc/.initial={}, desc/.default={},
66     type/.initial={}, type/.default={},
67     date/.initial={}, date/.default={},
68     end/.initial={}, end/.default={},
69     tikz/.initial={}, tikz/.default={},
70     period/.initial={nil}, period/.default={nil},
71     shift/.initial={true}, shift/.default={true},
72     print/.initial={true}, print/.default={true},
73 }

```

## 2.2 Tikz Calendar add weekday labels

```

74 \tikzoption{day headings}{\tikzstyle{day heading}=[#1]}
75 \tikzstyle{day heading}=[]
76 \tikzstyle{day letter headings}=[
77     execute before day scope={ \ifdate{day of month=1}{%
78         \pgfmathsetlength{\pgf@ya}{\tikz@lib@cal@yshift}%
79         \pgfmathsetlength{\pgf@xa}{\tikz@lib@cal@xshift}%
80         \pgftransformyshift{-\pgf@ya}
81         \foreach \d/\l in {0/M,1/T,2/W,3/T,4/F,5/S,6/S} {
82             \pgf@xa=\d\pgf@xa%
83             \pgftransformxshift{\pgf@xa}%
84             \pgftransformyshift{\pgf@ya}%
85             \node[every day,day heading]{\l};%
86         }
87     }{}%
88 }%
89 ]

```

### 2.2.1 Local Stuff (timetable-env local)

**timetable** This is the environment doing all the stuff. To gate the positions where the corresponding macros can be used (and in terms of pgfkeys for reasons of default values) all the macros used are put into the environment.

```

90 \newenvironment{timetable}[1][]{
91     \section*{\faClockO-Timetable}

```

Read the arguments given by the user after restoring the defaults (Restoring currently makes no sense, since they are created a few lines above anyways, but creation might be moved outside the environment some day.

Afterwards the lua module is beeing initialized (erase data from possible previous runs.

```

92     \pgfkeys{/semesterplanner-lua/timetable/env/.cd, days,start time,end time, width,length,
93     \directlua{sp.init{
94         days=[[ \pgfkeysvalueof{/semesterplanner-lua/timetable/env/days}]],
95         min=[[ \pgfkeysvalueof{/semesterplanner-lua/timetable/env/start time}]],
96         max=[[ \pgfkeysvalueof{/semesterplanner-lua/timetable/env/end time}]],
97         dayse=[[ \pgfkeysvalueof{/semesterplanner-lua/timetable/env/dayse}]]]}

```

**\semesterplanner@event** Is used to pass the event to the lua engine which in turn will collect the event to draw it in the end. For that the arguments given are parsed after restoring the pgf keys to their default values. The optional argument herby is a sequence of pgf keys, the second argument is a string representing the content (this MUST be unexpanded since this is passed to lua which in turn will pass it unmodified back)

```

98     \newcommand{\semesterplannerLua@event}[1][]{
99         \pgfkeys{/semesterplanner-lua/timetable/event/.cd,content,time,day,tikz,scale
100         width,offset,textcolor,title,speaker,location,prio,formatter, ##1}
101         \directlua{
102             sp.addEvent{
103                 time="\pgfkeysvalueof{/semesterplanner-lua/timetable/event/time}",
104                 day="\pgfkeysvalueof{/semesterplanner-lua/timetable/event/day}",
105                 tikz=[[ \pgfkeysvalueof{/semesterplanner-lua/timetable/event/tikz}]],
106                 offset=\pgfkeysvalueof{/semesterplanner-lua/timetable/event/offset},
107                 scale_width=\pgfkeysvalueof{/semesterplanner-lua/timetable/event/scale width}

```

```

108         formatter=\pgfkeysvalueof{/semesterplanner-lua/timetable/event/formatter},
109         textcolor=[\pgfkeysvalueof{/semesterplanner-lua/timetable/event/textcolor}],
110         title=[\pgfkeysvalueof{/semesterplanner-lua/timetable/event/title}],
111         speaker=[\pgfkeysvalueof{/semesterplanner-lua/timetable/event/speaker}],
112         location=[\pgfkeysvalueof{/semesterplanner-lua/timetable/event/location}],
113         prio=[\pgfkeysvalueof{/semesterplanner-lua/timetable/event/prio}],
114     }
115 }
116 }

```

Short-hand macros for different events using the corresponding background color

**\lecture**

```

117 \newcommand{\lecture}[1][]{
118     \semesterplannerLua@event[tikz={fill=lecture,}, textcolor=white, ##1]
119     \ignorespaces
120 }

```

**\seminar**

```

121 \newcommand{\seminar}[1][]{
122     \semesterplannerLua@event[tikz={fill=seminar,}, textcolor=white, ##1]
123     \ignorespaces
124 }

```

**\tutorial**

```

125 \newcommand{\tutorial}[1][]{
126     \semesterplannerLua@event[tikz={fill=tutorial,}, textcolor=white, ##1]
127     \ignorespaces
128 }

```

**\meeting**

```

129 \newcommand{\meeting}[1][]{
130     \semesterplannerLua@event[tikz={fill=meeting,}, textcolor=white, ##1]
131     \ignorespaces
132 }

```

**\officehour**

```

133 \newcommand{\officehour}[1][]{
134     \semesterplannerLua@event[tikz={fill=officehour,}, textcolor=white, ##1]
135     \ignorespaces
136 }

```

```

137 }{

```

At the end of the environment after all events have been collected, generate and output the tikz code needed to draw the timetable.

```

138 \directlua{sp.draw(
139     [[\pgfkeysvalueof{/semesterplanner-lua/timetable/env/length}]],
140     [[\pgfkeysvalueof{/semesterplanner-lua/timetable/env/width}]])}
141 }

```

```

142

```

**printSpCalendar** Print a calendar from startDate to endDate (encoded as YYYY-MM-DD) as one calendar per month in a matrix with the given amount of columns

```

143 \newcommand{\printSpCalendar}[3][3]{\directlua{cal.drawCalendar("#2", "#3", #1)}}

```

```

144

```

```

145 \newenvironment{appointments}[2][Room]{
