# semesterplanner-lua — Semesterplanner package in lua with tikz only\*

## Lukas Heindl

♦: https://gitlab.com/AtticusSullivan/semesterplanner-lua

#### Released?

#### Abstract

This package provides a mean to easily print a timetable e.g. for a semesterplan. The reason for this package to exist is that I wanted to reimplement <a href="https://github.com/nlschn/semesterplanner/">https://github.com/nlschn/semesterplanner/</a> with printing the timetable with tikz only (which is more easily to be modified) and with the ability to make entries spanning only a fraction of the column (for showing simultanious events).

Documents using this package need to be compiled with LuaLaTeX. The package requires xcolor, fontawesome, tikz (and pgfkeys).

## Contents

1	Usage	1
	1.1 timetable	1
	1.1.1 Special Notes	2
	1.1.2 Example	3
	1.2 Icons	3
2	Implementation	4
	2.1 semesterplanner-lua.sty	4
	2.1.1 Global Stuff	4
	2.1.2 Local Stuff (timetable-env local)	5
	2.2 semesterplanner-lua-timetable.lua	
	2.3 semesterplanner-lua-appointment.lua	12
3	Change History	13
4	Index	14

## 1 Usage

#### 1.1 timetable

days List of the names of the days that should be set as column names. Note that if you specify only 4 names only these 4 columns will be printed (with the first day

being identified as Monday) Default: Mon, Thue, Wend, Thur, Fri

start time Explicit start-time of the timetable given in minutes (HH\*60 + MM). Can be
 set as start time/.evaluated={HH\*60 + MM}. If this is empty, the start time is
 derived from the given events. Default: ""

<sup>\*</sup>This file describes version ?, last revised ?.

end time Equivalent to start-time Default: ""

width Give the width of the timetable. (can be given e.g. as \textwidth as this is directly given to tikz). Default: \textwidth

length Give the length of the timetable (measured in cm) (has to be a straight number since this is needed in calculation) Default: 10

This is the core environment of this package. Within it you can use \lecture, \seminar, \tutorial, \officehour and \meeting. All these commands are only defined inside the timetable environment, and have the same structure.

```
\lecture \lecture \Name\{Lecturer\}{Place\}{Day\}{Time\}{Priority\}{Event-code\} \tutorial \Name\}{Lecturer\}{Place\}{Day\}{Time\}{Priority\}{Event-code\} \seminar \Name\}{Lecturer\}{Place\}{Day\}{Time\}{Priority\}{Event-code\} \officehour \Name\}{Lecturer\}{Place\}{Day\}{Time\}{Priority\}{Event-code\} \meeting \Name\}{Lecturer\}{Place\}{Day\}{Time\}{Priority\}{Event-code\} \meeting \Name\}{Lecturer\}{Place\}{Day\}{Time\}{Priority\}{Event-code\} \meeting \Name\}{Lecturer\}{Place\}{Day\}{Time\}{Priority\}{Event-code\} \meeting \Name\}{Lecturer\}{Place\}{Day\}{Time\}{Priority\}{Event-code\} \meeting \Name\}{Day\}{Time\}{Priority\}{Event-code\} \meeting \Name\}{Day\}{Time\}{Time\}{Priority\}{Event-code\} \meeting \meeting \Name\}{Day\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}{Time\}
```

Name Give the name of the lecture

Lecturer Give the name of the lecturer

Place Give the place of the event (most probably the room or an online plattform, see 1.2)

Day The weekday on which the event takes place. Has to be one of M, T, W, Th, F for Monday, Thuesday, Wednesday, Thursday, Friday. Might become customizable in a future version.

Time The timespan of the event formatted as HH:MM-HH:MM (24H clock)

**Priority** The priority of the event (see 1.2)

Event-code Free customizable event code. See the documentation at the end for keys that can be used here (all keys in /event). To simply pass arguments to the tikz-node that is being created for the event use tikz/.append={your arguments} (be careful with text width, text height, text depth as these keys are being used for the dimensions of the node as well as with anchor)

The entries Day and Time are mandatory since they are needed for the positioning of the node. All others are merely necessary for the content of the node and are therefore nor mandatory.

#### 1.1.1 Special Notes

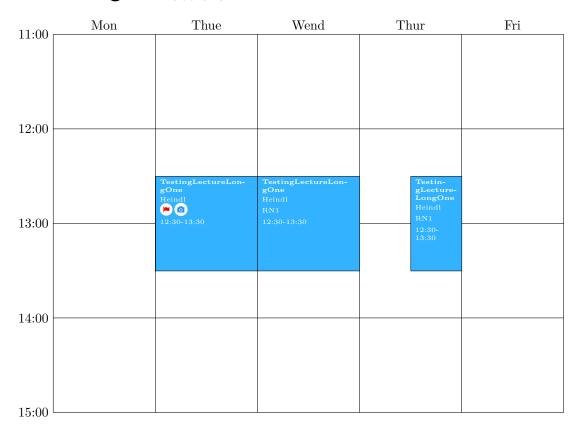

Note that the length argument does specify the length of the timetable without taking account of the column headers.

Same goes for the width parameter regarding the labels containing the time on the right. Since in this case any tex-length is allowed, you can simply try to subtract the length of the clock label using something like \settowidth{\length}{12:30} to set a length to the length of a clock label and then subtract this from the length you want to specify.

Hint: The content of the environment isn't processed by this package. Only the event commands (so to speak \lecture,\tutorial,\seminar,\officehour,\meeting are relevant. All other contents are set immediately before the timetable. Therefore, if you wan to add e.g. a \hspace\*{10cm} to shift the timetable to the left, the last line of the env would be the place to do so (there musn't be an empty line below since otherwise a new paragraph is started).

## 1.1.2 Example

## ② Timetable

## 1.2 Icons

This package defines some modified fontawesome icons (they are being encircled with a white circle for better readability).

\zoom	0	\teams	
\BBB	$\mathbf{B}$	\youtube	
\pmandatory	A	\phigh	
\pmid		\plow	
\pnone	8		
\tbd	?	\tba	₹

## 2 Implementation

This package uses semesterplanner-lua as prefix/directory where possible. Since this is not possible for latex macro names, in this occasions semesterplannerLua@ is used as prefix.

## 2.1 semesterplanner-lua.sty

#### 2.1.1 Global Stuff

1 (\*package)

```
Define some colors for the course types (can be globally overwritten)
                                2 \definecolor{seminar}{rgb}{1.0, 0.8, 0.0}
                                3 \definecolor{lecture}{rgb}{0.2, 0.7, 1.0}
                                4 \definecolor{tutorial}{rgb}{0.0, 0.8, 0.0}
                                5 \definecolor{meeting}{rgb}{0.8, 0.0, 0.0}
                                6 \definecolor{officehour}{rgb}{0.0, 0.4, 0.6}
                                7 \definecolor{DodgerBlue}{HTML}{1E90FF}
                              This macro puts a circle arround its argument for better readability. In this package this
\semesterplannerLua@encircle
                              is used for the fontawesome symbols.
                                      \newcommand*{\semesterplannerLua@encircle}[1]{
                                9
                                          \begin{minipage}[b][1em][c]{1.5em}
                               10
                                              \begin{tikzpicture}
                               11
                                                  \node[fill,circle,inner sep=1pt, color = white] {#1};
                                              \end{tikzpicture}
                               12
                                          \end{minipage}
                               13
                              Commands for exams
                       \oral

             Load the lua modules
          28 \directlua{sp = require("semesterplanner-lua-timetable.lua")}
          29 \directlua{app = require("semesterplanner-lua-appointment.lua")}
```

#### 2.1.2 Local Stuff (timetable-env local)

This is the environment doing all the stuff. To gate the positions where the corresponding macros can be used (and in terms of pgfkeys for reasons of default values) all the macros used are put into the environment.

```
30 \newenvironment{timetable}[1][]{
31 \section*{\faClock0~Timetable}}
```

Set all the pgfkeys required for the arguments. To achieve that the defaults are restored every time the environment is used, this is inside the environment definition. This of course disables all possibilities of setting a global default but enables setting local defaults for the events

```
32 \pgfkeys{
```

/semesterplanner-lua will be the pgf-path used for this package Set the environment arguments arguments. days, width and height are used later in drawing. start time and end time are important for collecting the events as well.

days is a list of strings representing the header names for the day columns in the timetable (adding Sat and Sun (additional entries) will result in two more columns.

length is the vertical length of the timetable (not including the clock labels on the side) measured in cm (in future versions this may become measured in pts for better interaction with the LaTeX lengths.

width is the horizontal width of the timetable (not including the column headers on the top) this can be a latex length string or \textwidth as well.

start time can be used to set a fixed time where the timetable starts (otherwise this
 is calculated from the entries) to enable this behaviour this key has to be set to
 HH\*60 + MM (easy way is by using start time/.evaluated={HH\*60+MM})

end time equivalent to start time

```
33
           /semesterplanner-lua/.cd,
           days/.initial={Mon,Thue,Wend,Thur,Fri},
34
           days/.default={Mon,Thue,Wend,Thur,Fri},
35
           %
36
37
           start time/.initial=,
38
           start time/.default=,
39
           end time/.initial=,
           end time/.default=,
40
41
           width/.initial=\textwidth,
42
           width/.default=\textwidth,
43
           length/.initial=10,
44
           length/.default=10,
45
```

/semesterplanner-lua/event is the path where the keys relevant for the event macro resides

content is the content of the event (is passed on without any formatting). Since this is passed to lua without modification its value must be an unexpanded string (lua will simply print it so the eventually the string will be evaluated)

time is a HH:MM-HH:MM string representing start- and end-time of the event

day is either M,T,W,Th or F specifying the day on which the event takes place

tikz this key allows the user to manually pass options to the node created for this event

scale width allows to scale the width of the event to be able to draw overlapping events besides each other. Will usually be a value between 0 and 1.

offset same goal like scale width but shifts the event node by the given value to the right. (Given as value between 0 and 1 indicating how many columns the event should be shifted)

```
47
           event/.cd,
48
           % event arguments
49
           content/.initial=,
           content/.default=,
50
51
           time/.initial=,
52
           time/.default=,
53
           day/.initial=,
54
           day/.default=,
55
56
           tikz/.initial=,
57
           tikz/.default=,
58
           scale width/.initial=1,
59
60
           scale width/.default=1,
           offset/.initial=0,
61
           offset/.default=0,
62
63
```

Read the argumens given by the user after restoring the defaults (Restoring currently makes no sense, since they are created a few lines above anyways, but creation might be moved outside the environment some day.

Afterwards the lua module is beeing initialized (erase data from possible previous runs.

\semesterplanner@event

Is used to pass the event to the lua engine which in turn will collect the event to draw it in the end. For that the arguments given are parsed after restoring the pgf keys to their default values. The optional argument herby is a sequence of pgf keys, the second argument is a string representing the content (this MUST be unexpanded since this is passed to lua which in turn will pass it unmodified back)

```
\newcommand{\semesterplannerLua@event}[2][]{
69
          \pgfkeys{/semesterplanner-lua/event/.cd,content,time,day,tikz,scale width,
70
          offset, ##1, content=##2}
71
          \directlua{
72
              sp.addEvent{
73
                   time="\pgfkeysvalueof{/semesterplanner-lua/event/time}",
74
                   day="\pgfkeysvalueof{/semesterplanner-lua/event/day}",
75
                   tikz=[[\pgfkeysvalueof{/semesterplanner-lua/event/tikz}]],
76
                   content=[[\pgfkeysvalueof{/semesterplanner-lua/event/content}]],
77
                   offset=\pgfkeysvalueof{/semesterplanner-lua/event/offset},
78
                   scale_width=\pgfkeysvalueof{/semesterplanner-lua/event/scale width},
79
```

```
80
81 }
82 }
```

terplannerLua@formattedEvent

Simply a layer above \semesterplannerLua@event which formats the content before passing it on. This formatting is thought to be a good formatting for lecture-like entries and is heavily stolen from <sup>1</sup> Takes a number of arguments:

- 1. title of the event
- 2. name of the speaker/lecturer
- 3. location (e.g. roomnumber)
- 4. day on which the event takes place (for valid values see the day pgf key above)
- 5. time (for valid values / formatting see the time pgf key above)
- priority of the event (no special formatting needed, consider using one of \phigh,
   ...
- 7. event code. This is passed to event-pgf unmodified and can overwrite any of the above keys. To add some arguments to tikz simply use tikz/.append={draw=green}
- 8. background color of the event
- 9. text color of the content

```
83
                                                      \def\semesterplannerLua@formattedEvent##1##2##3##4##5##6##7##8##9{
84
                                                                                          \semesterplannerLua@event[time=##5, day=##4, tikz={fill=##8,}, ##7]
 85
                                                                                          {
 86
                                                                                                                            \unexpanded{
                                                                                                                                                              \textcolor{##9}{
 87
                                                                                                                                                                                                \textbf{##1}\\[.2em]
